

100 Linux Commands

Part 10 (91-100)

91	apt		Advanced Package Tool (Debian/Ubuntu).	Example: <code>apt update</code>
92	apt-get		Package management tool (legacy).	Example: <code>apt-get install nginx</code>
93	yum		Yellowdog Updater Modified (RHEL/CentOS).	Example: <code>yum install httpd</code>
94	dnf		Dandified YUM (Fedora/RHEL 8+).	Example: <code>dnf install vim</code>
95	snap		Install and manage Snap packages.	Example: <code>snap install code</code>
96	flatpak		Install and manage Flatpak packages.	Example: <code>flatpak install spotify</code>
97	dpkg		Debian package management tool.	Example: <code>dpkg -i package.deb</code>
98	rpm		Red Hat Package Manager.	Example: <code>rpm -ivh package.rpm</code>
99	env		Display environment variables.	Example: <code>env</code>
100	export		Set an environment variable.	Example: <code>export PATH=\$PATH:/usr/local/bin</code>

Learn Today, Automate Tomorrow!

100 Linux Commands

Part 9 (81-90)

81	systemctl	Control the systemd system and service manager.		Example: <code>systemctl status sshd</code>
32	service	Run a System V init script (legacy service manager).		Example: <code>service apache2 restart</code>
53	journalctl	Query and display logs from systemd-journald.		Example: <code>journalctl -xe</code>
54	dmesg	Print or control the kernel ring buffer (boot and hardware messages).		Example: <code>dmesg grep eth0</code>
55	crontab	Maintain crontab files for individual users (schedule jobs).		Example: <code>crontab -e</code>
56	at	Execute commands at a specified time (one-time jobs).		Example: <code>echo "shutdown now" at 23:00</code>
57	uptime	Show how long the system has been running.		Example: <code>uptime -p</code>
58	reboot	Reboot the system.		Example: <code>reboot</code>
59	shutdown	Halt, power off, or reboot the machine.		Example: <code>shutdown -h now</code>
80	date	Print or set the system date and time.		Example: <code>date +%Y-%m-%d</code>

100 Linux Commands

Part 8 (71-80)

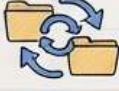

71	ping	Send ICMP ECHO_REQUEST to network hosts.		Example: <code>ping google.com</code>
32	ip	Show / manipulate routing, devices, policy routing and tunnels.		Example: <code>ip addr show</code>
53	ifconfig	Configure a network interface (deprecated in favor of 'ip').		Example: <code>ifconfig eth0</code>
54	netstat	Print network connections, routing tables, interface statistics (partially deprecated).		Example: <code>netstat -tuln</code>
55	ss	Another utility to investigate sockets (replacement for 'netstat').		Example: <code>ss -tulpn</code>
56	traceroute	Print the route packets trace to network host.		Example: <code>traceroute example.com</code>
57	dig	DNS lookup utility.		Example: <code>dig google.com A</code>
58	nslookup	Query Internet name servers interactively.		Example: <code>nslookup example.com</code>
59	hostname	Show or set the system's host name.		Example: <code>hostnamectl</code> (preferred modern alternative, can also just be 'hostname')
80	route	Show / manipulate the IP routing table (partially deprecated in favor of 'ip route').		Example: <code>route -n</code>

100 Linux Commands

Part 7 (61-70)

51	tar	Archive files and directories.		Example: <code>tar -cvf archive.tar dir/</code>
32	gzip	Compress files using Lempel-Ziv coding.		Example: <code>gzip file.txt</code>
53	gunzip	Decompress gzip-compressed files.		Example: <code>gunzip file.txt.gz</code>
54	zip	Package and compress files into a ZIP archive.		Example: <code>zip archive.zip file1 file2</code>
55	unzip	Extract files from a ZIP archive.		Example: <code>unzip archive.zip</code>
56	rsync	Remote sync; copy and synchronize files remotely and locally.		Example: <code>rsync -avz src/ dest/</code>
57	scp	Secure copy; copy files between hosts on a network.		Example: <code>scp file.txt user@remote:/path/</code>
58	wget	Retrieve content from the web.		Example: <code>wget https://example.com/file.tar.gz</code>
59	curl	Transfer data from or to a server (more versatile than wget).		Example: <code>curl -O https://example.com/file.txt</code>
				Example: <code></code>
70	ssh	Secure Shell; remote login and command execution.		Example: <code>ssh user@remote-host</code>

100 Linux Commands

Part 6 (51-60)

51	df	Display disk space usage of file systems.		Example: df -h
32	du	Estimate file and directory space usage.		Example: du -sh /home/user
53	free	Display amount of free and used memory in the system.		Example: free -h
54	mount	Mount a file system or storage device.		Example: mount /dev/sdb1 /mnt
55	umount	Unmount a mounted file system.		umount /mnt
56	lsblk	List information about all available block devices.		Example: lsblk
57	fdisk	Manipulate disk partition table.		Example: sudo fdisk -l
58	blkid	Print or find block device attributes (UUID and type).		Example: blkid
59	mkfs	Build a Linux file system on a device.		Example: sudo mkfs.ext4 /dev/sdb1
				Example: sudo fslk /dev/sdb1
60	fscck	Check and repair a Linux file system.		Example: sudo fscck /dev/sdb1

100 Linux Commands

Part 5 (41-50)

41	ps		Show running processes.	Example: ps
42	top		Live process monitor.	Example: top
43	htop		Interactive process viewer.	Example: htop
44	kill		Terminate a process.	Example: kill 1234
45	killall		Kill processes by name.	Example: killall firefox
46	jobs		Show background jobs.	Example: jobs
47	bg		Resume a job in background.	Example: bg %1
48	fg		Bring job to foreground.	Example: fg %1
49	nohup		Run command after logout.	Example: nohup python app.py &
50	nice		Run process with priority.	Example: nice -n 10 command

Practice Linux Every Day

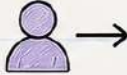

100 Linux Commands

Part 4 (31-40)

31	chmod	Change file permissions.	 <table data-bbox="959 636 1027 732"><tr><td>rwX</td></tr><tr><td>r-x</td></tr><tr><td>r--</td></tr></table>	rwX	r-x	r--	Example: chmod 755 file.txt
rwX							
r-x							
r--							
32	chown	Change file owner.		Example: chown user file.txt			
33	chgrp	Change file group.		Example: chgrp group file.txt			
34	id	Display user and group IDs.	 uid=1000 gid=1000 groups=10	Example: id			
35	whoami	Show current user.		Example: whoami			
36	groups	Show groups of current user.		Example: groups			
37	passwd	Change user password.	 ****	Example: passwd			
38	sudo	Execute command as another user.		Example: sudo apt update			
39	su	Switch to another user.		Example: su root			
40	umask	Set default file permissions.	 666	Example: umask 022			

Learn Linux, Grow Every Day! ♥

100 Linux Commands

Part 3 (21-30)

21

find

Search for files and directories in a directory hierarchy.

Example:

```
find /home -name file.txt  
find . -type d
```

22

locate

Find files quickly using prebuilt database.

Example:

```
locate file.txt  
locate notes.pdf
```

23

grep

Search text patterns in files.

Example:

```
grep "error" file.log  
grep -i "linux" notes.txt
```

24

which

Show the full path of a command.

Example:

```
which python  
which ls
```

25

whereis

Locate binary, source and manual page of a command.

Example:

```
whereis python  
whereis ls
```

26

history

Show command history.

Example:

```
history  
history | less
```

27

alias

Create an alias for a command.

Example:

```
alias ll='ls -l'  
alias gs='git status'
```

28

unalias

Remove an alias.

Example:

```
unalias ll  
unalias gs
```

29

man

Display the manual page of a command.

Example:

```
man ls  
man grep
```

30

help

Show help for built-in commands.

Example:

```
help cd  
help echo
```

100 Linux Commands

Part 2 (11-20)

⑪ **echo**  Display text or output in the terminal.

Example:

```
echo Hello World  
echo $HOME
```

⑫ **nano**  Text editor in the terminal (simple and beginner friendly).

Example:

```
nano file.txt
```

⑬ **vim**  Advanced text editor powerful and highly customizable.

Example:

```
vim file.txt
```

⑭ **head**  Display the first lines of a file.

Example:

```
head file.txt  
head -n 10 file.txt
```

⑮ **tail**  Display the last lines of a file.

Example:

```
tail file.txt  
tail -n 10 file.txt
```

⑯ **less**  View file content page by page.

Example:

```
less file.txt
```

⑰ **more**  View file content one screen at a time.

Example:

```
more file.txt
```

⑱ **wc**  Count lines, words and characters in a file.

Example:

```
wc file.txt  
wc -l file.txt
```

⑲ **sort**  Sort lines of text in alphabetical order.

Example:

```
sort file.txt  
sort -n numbers.txt
```

⑳ **uniq**  Remove duplicate lines from a file.

Example:

```
uniq file.txt  
sort file.txt | uniq
```

Practice Daily, Improve Daily!

100 Linux Commands

Part 1 (Commands 1-10)

①	pwd	Show current directory		Example: <code>pwd</code>
②	ls	List files		Example: <code>ls -l</code>
③	cd	Change directory		Example: <code>cd /home/anu</code>
④	mkdir	Create directory		Example: <code>mkdir my_folder</code>
⑤	touch	Create file		Example: <code>touch file.txt</code>
⑥	cat	View file		Example: <code>cat file.txt</code>
⑦	cp	Copy files		Example: <code>cp file.txt backup.txt</code>
⑧	mv	Move / Rename files		Example: <code>mv old.txt new.txt</code>
⑨	rm	Delete files		Example: <code>rm file.txt</code>
⑩	clear	Clear terminal		Example: <code>clear</code>
