

10/10

Quick Memory Trick ★

/ → Everything starts here

/home → User files

/etc → Settings

/var → Logs

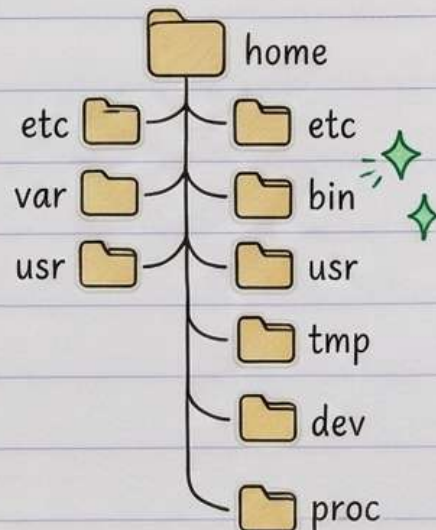

/bin → Commands

/usr → Applications

/tmp → Temporary files

/dev → Devices

/proc → Running processes

Save this post
for later!

9/10

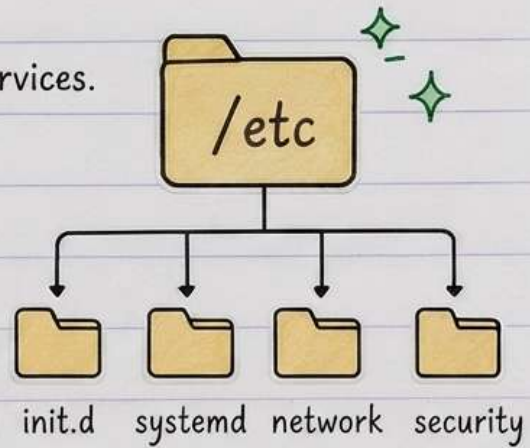

/etc

Contains:

- Configuration files for system services.
- User account information (passwd, shadow).
- Network configuration scripts.
- Startup and shutdown scripts.
- System-wide application configs.

Example:

/etc/network/interfaces

Critical for managing system behavior and startup. Edit with care!

8/10

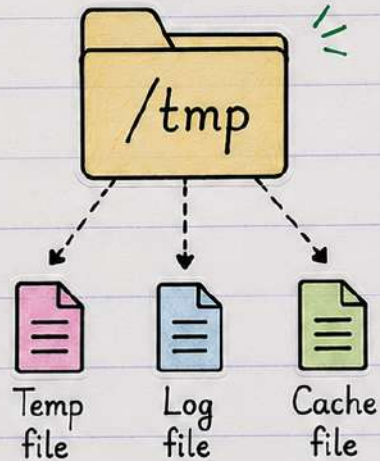

/tmp

Temporary files directory.

Contains:

- Temporary files
- System logs (sometimes)
- Files deleted after reboot
- Safe to clear manually

Example:

ls /tmp

Files in /tmp are meant to be temporary and may be deleted automatically.

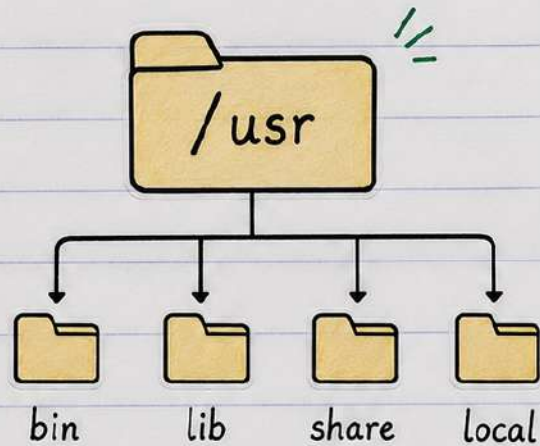

/usr

User utilities and applications.

Contains:

- User programs
- Libraries
- Documentation
- Shareable files

Example:

`/usr/bin/python3`

Most user-level programs and tools live here.

6/10

/bin & /sbin

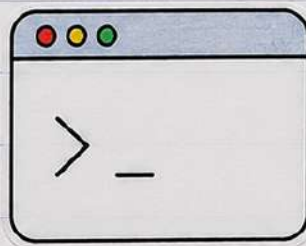

/bin

Essential system commands

Examples:

- ls
- cp
- mv
- cat

These commands
are available
for all users.

/sbin

System administration
commands for root.

Examples:

- fdisk
- ifconfig
- reboot
- shutdown

Used for system
maintenance and
administration.

5/10

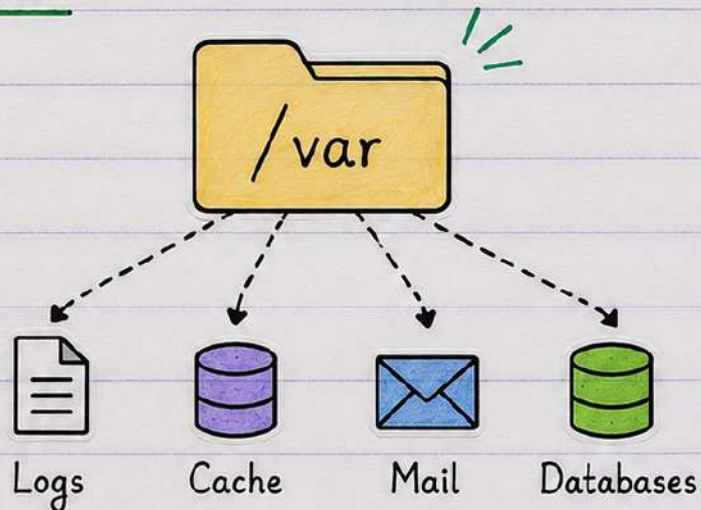

/var

Variable data

Stores:

- Logs
- Cache
- Mail
- Databases

Example:

/var/log

/var holds files that
change frequently.

4/10

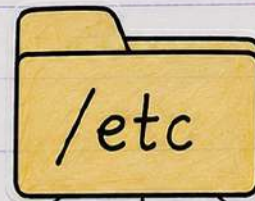

/etc

Configuration files

Contains:

- Network settings
- Password files
- Service configs

Network
settings

Password
files

Service
configs

Example:

/etc/passwd

Central place for all
system configurations.

3/10

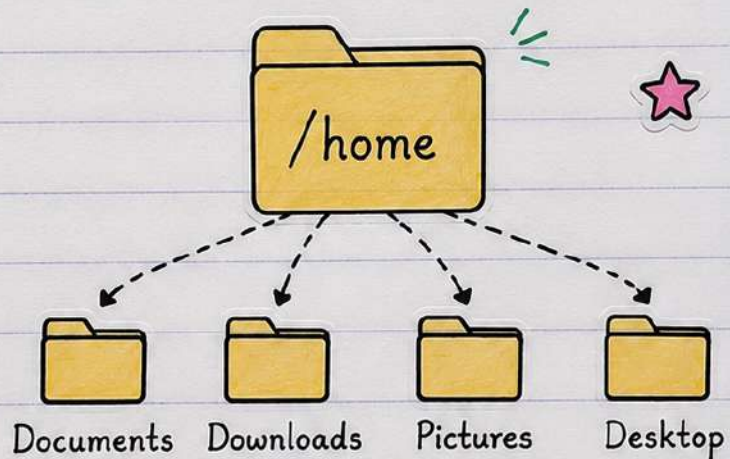

/home

Stores user files

Examples:

- Documents
- Downloads
- Pictures
- Desktop

Example:

/home/anurag

All users have
their own
directory here.

2/10

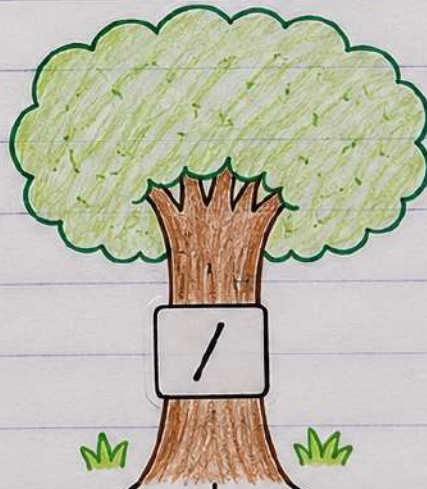

/ (Root)

- Top-level directory
- Everything starts here
- Parent of all directories

Think of it
as the main
trunk of a tree.

Linux Directory Structure

Explained Simply 

Know where everything
lives in Linux
